## Work Experience

**Huawei** São Paulo, SP
Software Business Oct 2025 - May 2026

- Diagnosed production incidents across enterprise Linux servers and queried Oracle SQL databases to isolate root causes, supporting critical infrastructure serving over 5M end users
- Maintained virtualized environments (VMs) and resolved network architecture bottlenecks, ensuring >99.9% SLA compliance across B2B enterprise partner deployments
- Automated routine diagnostic checks and log analysis using Bash shell scripting, reducing 100+ VMs per-host manual troubleshooting into single-command for high-priority service requests.
- Partnered directly with core internal engineering teams to escalate software defects, verify system patches, and review configuration rollbacks

**Grafiame** Nova Odessa, SP
Full Stack Developer (Contract) Dec 2020 - Feb 2021

- Engineered backend services for an educational web platform using Node.js (Express.js) and Firebase Firestore, handling user authentication and content delivery for 500+ students
- Designed and integrated an automated transactional email pipeline using Amazon SES and EC2, ensuring dependable message delivery across platform workflows
- Integrated an automated writing assistant chatbot using IBM Watson APIs, connecting natural language processing endpoints to the application backend
- Built and updated the company's institutional web presence using Gatsby (React/JavaScript) from design specifications, optimizing page load performance and SEO.

## Education

**University of São Paulo** São Paulo, SP
Bachelor's in Information Systems Mar 2023 - Expected Sept 2027

- **Relevant coursework:** Data structures, Analysis of algorithms, Operating systems, Computer networks, Computer architecture, Calculus
- **Activities:** Student representative for SBC (Brazilian Computing Society), Security Researcher at inTheShell_ (CTF organization) and Infrastructure Engineer at SSI (Information Systems Week)

## Technical Skills

**Languages**: Python, C, C++, SQL, Shell Script (Bash), Javascript, Typescript
**Systems & Cloud**: Linux (Debian, Ubuntu, RHEL), Google Cloud Platform (GCP), AWS (EC2, SES)
**Infrastructure & Tools**: Docker, Kubernetes, Ansible, Git, Github, CI/CD
**ML & Data**: Postgres Database, Pandas, NumPy, scikit-learn, MLflow
**Web Technologies**: React, Next.js, SASS, Django, Flask, Firebase, REST API
**Spoken Languages**: English (C1), Portuguese (Native), Spanish (Basic)

## Engineering Projects & Research

**Academic Research - USP** São Paulo, SP
Experimental data acquisition and logging assistant Aug 2023 - Aug 2024

- Studied voltage measurement hardware for lab experiments to achieve a high-precision and low-cost solution
- Developed a system using Arduino and Raspberry Pi for automating data collection, enabling the co-supervisor to gather 100x more data collection, improving her research quality
- Created Python software for system control and data visualization

**Elementary Roots** Campinas, SP
Local People's Choice Winner at NASA Space Apps Hackathon 02 Feb 2021 - 03 Feb 2021

- Awarded Local People's Choice Winner out of 42 competing teams for idealizing a deployable agricultural greenhouse origami concept for space environments
- Built and published the project website showcasing solution 3D view and contributed to the production of the featured pitch video.

**Computing Lab** São Paulo, SP

Studies involving multiple computers in a university lab Apr 2023 - Present

- Designed and implemented an 8-node cluster using Kubernetes and SLURM to study distributed environments
- Set up an internal network using switches and static IPs
- Created automated Ansible playbooks for configuration management and node updates
